# Velo taxi

The Velotaxi is modern electric tricycle with a positive image: eco-friendly, innovative, flexible and sporty. It is designed for running a professional passenger transport/sightseeing/delivery business, combined with the commercialization of the vehicles - especially the cabin surface - as a highly visible, mobile out-of-home media. It could bring innovation, environmental protection and economic efficiency.

# Features

## Go green concept

Climate change and air pollution force us to realize the importance of environmental protection. Higher fuel prices have driven up transportation costs. More and more people choose green lifestyle. Velotaxi gives an ideal solution for people's desire for eco-friendly and economical. It helps us to build a new concept of going green.

# Features

## Design

The cabin is made of 100% recyclable polyethylene, making it stand out from other pedicabs. The standard colour for the cabin is white. It can be used as advertisement space by covering the whole surface or parts of it with large stickers. What makes the cabin unique in comparison with the traditional rickshaws is that for the first time in pedicab history, the rider is included in the cabin, allowing him to share the same space and protection with the passengers.

# Features

## Advertising concept and business

Velotaxis rent the surface to advertising and event clients, and offer various services such as sightseeing tours, free shuttles during big events like trade fairs, sporting events, delivery and courier services, etc.

# Features

## Comfortable seat

The upright seat angle can be easily adjusted to one of three positions between 42 to 49 degrees.

# Features

## Humanitarian features

The specially designed steel frame combines stability and comfort during the ride. The aerodynamic designed cab has enough space so that the driver and two passengers with light luggage have comfortable seats. An ergonomic semi-reclining seat provides an effective power transfer. The headlights, turn signals and tail lights make you ride more safe.

# Features

## EPAC (Electrically Power Assisted Cycle)

The Velotaxi is equipped with electric assist, which is the same as on a regular electric-assisted bicycle. The electric assist cannot work without pedaling, it is controlled by a Cadence sensor. Without pedaling, the Velotaxi does not move. The maximum speed is 20 km/h.

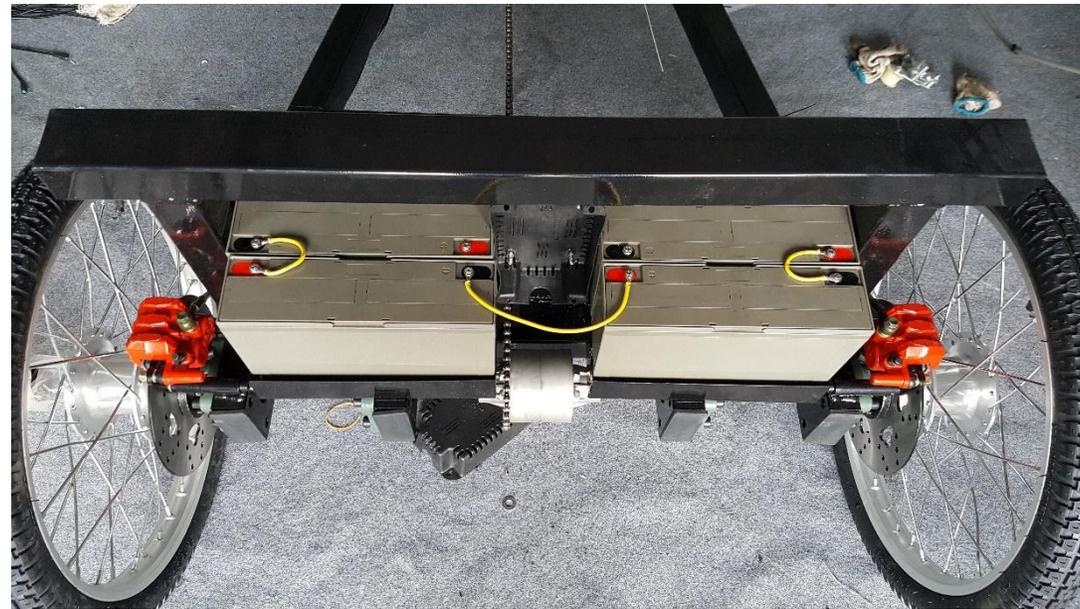

# Features

## Battery

The batteries can be charged with a special charger that is plugged into a normal 110V or 220V power source. The capacity of the batteries largely depends on how much they are used. Experienced drivers can get through their 6 hour day without running out of battery power.

# Features

## Low maintenance

Most of the consumable parts used to build the Velotaxi are standard bicycle components that your local bike shop will be able to service.

# Specification

Technical Data		Components	
Overall width	110 cm	Frame	High carbon steel
Overall height	175 cm	Cabin	Recyclable PE, standard white
Overall length	307 cm	Tires	19-2.25"
Track width	100 cm	Rim	Aluminum alloy
Wheel base	256 cm	Front brake	Mechanical disc brake
Weight	160 kg	Rear brakes	Hydraulic disc brake
Wheel size	19"	Brake levers	Aluminum alloy
Max. load	300 kg	Gears	Shimano 6 gears
Rider height	155-190 cm		
		Motor	60v 1000w rear hub motor
		Battery	60v 40Ah lead acid battery
		Display	LCD display
		Max. speed	20 kph
		Range	80 km
		Charging time	8 hours
